Studies that assess and analyse people's nutrition-related knowledge, attitudes and practices (KAP) are a useful method for gaining such an insight into peoples' personal determinants of their dietary habits. The manual offers guidance and practical steps for planning and conducting a KAP survey, and for analysing and reporting the survey findings

The fields of Global Health and Global Emergency Response have attracted increased interest and study. There has been tremendous growth in the educational opportunities around humanitarian emergencies; however, educational resources have not yet followed the same growth. This book corrects this trend, offering a comprehensive single resource dedicated to health in humanitarian emergencies. Providing an introduction to the public health principles of response to humanitarian emergencies, the text also emphasizes the need to coordinate the public health and emergency clinical response within the architecture of the greater response effort. With contributing authors among some of the world's leading health experts and policy influencers in the field, the content is based on best practices, peer reviewed evidence, and expert consensus. The text acts as a resource for clinical and public health practitioners, graduate-level students, and individuals working in response to humanitarian emergencies for government agencies, international agencies, and NGOs.

This training material is targeted primarily at government officials, with the view that training workshops should be part of a national plan for the support and scale-up of HWTS. These training materials are made up of a Trainer Manual, which provides guidance on planning workshops, selecting trainers and participants, logistic arrangements, and other preparations for workshops, and this manula for participants. The training materials may be adapted to suit the audience. As HWTS is relevant for other health initiatives, such as nutrition, maternal and child health, and HIV/AIDS, the wider application and dissemination of this training material is greatly encouraged as an option for improving the safety of water, especially among the vulnerable populations and the poor.

Significant programmatic experience and research evidence regarding HIV and infant feeding have accumulated since WHO's recommendations on infant feeding in the context of HIV were last revised in 2006. In particular, evidence has been reported that antiretroviral (ARV) interventions to either the HIV-infected mother or HIV-exposed infant can significantly reduce the risk of postnatal transmission of HIV through breastfeeding. This evidence has major implications for how women living with HIV might feed their infants, and how health workers should counsel these mothers. Together, breastfeeding and ARV intervention have the potential to significantly improve infants' chances of surviving while remaining HIV uninfected. While the 2010 recommendations are generally consistent with the previous guidance, they recognize the important impact of ARVs during the breastfeeding period, and recommend that national authorities in each country decide which infant feeding practice, i.e. breastfeeding with an ARV intervention to reduce transmission or avoidance of all breastfeeding, should be promoted and supported by their Maternal and Child Health services. This differs from the previous recommendations in which health workers were expected to individually counsel all HIV-infected mothers about the various infant feeding options, and it was then for mothers to decide between them. Where national authorities promote breastfeeding and ARVs, mothers known to be HIV-infected are now recommended to breastfeed their infants until at least 12 months of age. The recommendation that replacement feeding should not be used unless it is acceptable, feasible, affordable, sustainable and safe (AFASS) remains, but the acronym is replaced by more common, everyday language and terms. Recognizing that ARVs will not be rolled out everywhere immediately, guidance is given on what to do in their absence.

South Asia has the highest rates of malnutrition and the largest number of malnourished women and children in the world. Childhood malnutrition is the main cause of child mortality one-third of all child deaths are due to the underlying cause of malnutrition. For the children who survive, malnutrition results in lifelong problems by severely reducing a child's ability to learn and to grow to his or her full potential. Malnutrition directly leads to less productive adults and thus to weaker national economic performance. The negative impact of malnutrition on a society's productivity and a nation's long-term development is difficult to underestimate. Malnutrition is a key development priority for the World Bank's South Asia region. The Bank intends to increase its commitment to reducing malnutrition in the region. As a first step, Bank staff are preparing a series of country assessments such as Malnutrition in Afghanistan. These assessments will be useful for governments and development partners committed to scaling up effective, evidence-based interventions to reduce malnutrition in their countries. Conclusive evidence shows that a multisectoral planning approach, followed by actions in the various sectors, is the most successful method to improve a population's nutrition. Malnutrition in Afghanistan provides the background analysis for the development of a comprehensive nutrition action plan. The timing of this report is propitious. The international communities interest in the developmental benefits of nutrition programming is high. This analytical report is part of a broader effort by the World Bank South Asia region to increase investments in nutrition, recognizing that good nutrition is important to economic growth and development, and because investing in well-proven nutrition interventions pays high dividends in poverty reduction and national economic development.

Based on the IBLCE exam blueprint, this updated resource allows aspiring and established lactation consultants to assess their knowledge, experience, and expertise in developing an effective study plan for certification. The Second Edition of this text, contributed to by Rebecca Mannel, Patricia J. Martins, and Marsha Walker, has been updated and is the perfect resource to study for the certification exam.

The Humanitarian Charter and Minimum Standards will not of course stop humanitarian crises from happening, nor can they prevent human suffering. What they offer, however, is an opportunity for the enhancement of assistance with the aim of making a difference to the lives of people affected by disaster " Ton van Zutphen, Sphere Board Chair and John Damerell, Sphere Project Manager in the Foreword to the new edition of the Handbook. The Sphere Project is an initiative to determine and promote standards by which the global community responds to the plight of people affected by disasters. What ' s new in the 2011 edition of the Sphere Handbook The new edition of the Sphere Project ' s Handbook updates the qualitative and quantitative indicators and guidance notes and improves the overall structure and consistency of the text The new version has: * a rewritten Humanitarian Charter * updated common standards * a stronger focus on protection * revised technical chapters

WHO and UNICEF jointly developed this global strategy to focus world attention on the impact that feeding practices have on the nutritional status, growth and development, health, and thus the very survival of infants and young children. The strategy is the result of a comprehensive two-year participatory process. It is based on the evidence of nutrition's significance in the early months and years of life, and of the crucial role that appropriate feeding practices play in achieving optimal health outcomes. The strategy is intended as a guide for action; it identifies interventions with a proven positive impact; it emphasizes providing mothers and families the support they need to carry out their crucial roles, and it explicitly defines the obligations and responsibilities in this regards of governments, international organizations, and other concerned parties.
