## Lesson Practice C Dividing Polynomials

Getting the books **lesson practice c dividing polynomials** now is not type of inspiring means. You could not without help going later than books stock or library or borrowing from your associates to admission them. This is an entirely easy means to specifically get lead by on-line. This online statement lesson practice c dividing polynomials can be one of the options to accompany you taking into account having additional time.

It will not waste your time. acknowledge me, the e-book will definitely freshen you additional business to read. Just invest little mature to retrieve this on-line notice **lesson practice c dividing polynomials** as competently as review them wherever you

LESSON Reteach 6-3 Dividing

Polynomials (continued) When the divisor is in the form  $(x + a)$ , use synthetic division to divide. Divide:  $(2x^2 + 10x + 12) \div (x + 3)$ . Step 1 Find  $a$ . The divisor is  $(x + 3)$ . So,  $a = 3$ . Step 2 Write  $a$  in the upper left corner. Then write the coefficients of the dividend.  $2 \quad 10 \quad 12$  Step 3 Draw a horizontal line. Copy the first coefficient below the line.

*LESSON Reteach Dividing Polynomials*

c.  $x^2(x + 8) + 1(x + 8) = (x + 8)(x^2 + 1)$  d.  $x^2 + 1; (x + 1)(x + 1)$  e.  $(x + 8)(x + 1)(x + 1)$  1) Success for English Learners 1. I would use the formulas for the sum or difference of two cubes:  $a^3 + b^3 = (a + b)(a^2 - ab + b^2)$   $a^3 - b^3 = (a - b)(a^2 + ab + b^2)$  2. It is the greatest monomial that can divide every term in a polynomial. LESSON 6-5

Practice and Problem ...*

Here are the 3 Types of Dividing Polynomial Questions Your Students Will See. 1: To divide monomials use the laws of exponents in division. 2: To divide a polynomial by a monomial, we use  $(a + b) / c = a/c + b/c$ . 3: The last rule is to divide a polynomial by another polynomial with at least two terms. This type of division is applied only when the degree of the polynomial in the numerator is greater than or equal to the degree of polynomial in the denominator.

## C Dividing Polynomials

Find the quotient:  $(2x^2 + 5x + 3) \div (x + 3)$ .

$(2x^2 + 5x + 3) \div (x + 3)$ . Solution.

Write it as a long division problem. Be sure the dividend is in standard form.

Divide  $2x^2$  by  $x$ . Put the answer,  $2x$ , in the quotient over the  $x$  term. Multiply  $2x$  times  $x + 3$ . Line up the like terms under the dividend.
